

VIDNYAN MAHAVIDYALAYA, MALKAPUR
BEST PRACTICE-I
2021-22
Covid-19 Vaccination

1. Title of the Practice
"Covid-19 Vaccination"

2. Objectives of the Practice

- a) To spread awareness about Covid-19 vaccination
- b) To convey importance of vaccination to all the students.
- c) To conduct camps to achieve target of 100% vaccination

3. The Context

All over the world was facing the challenges due to Covid-19 disease. It was big challenge to deliver vaccines to all the citizens of India. We participate in this national programme of vaccination particularly for college students in the complete lockdown situation.

4. The Practice

On Google form data regarding number of vaccines doses monitored to each student was collected. Needful students were sorted out. Under the in-charge ship of one senior staff, 20-25 students were allotted to guardian staff to convince the students for vaccination. With the coordination of the Govt. Hospital Municipality and Alumni of the college two camps were arranged in the college to provide vaccination facility to the students, staff and family of staff members.

5. Evidence of Success

Every student and staff member of the college were vaccinated either by Covishield or Covaxin. There was 100% achievement apart from students and staff, family members of staff also benefited.

6. Problems Encountered and Resources Required

First problem was to reach and convince to students particularly rural students for importance of vaccination. Another was to make vaccines available and main problem was to follow the guideline of the social distancing laid down by govt. in the pandemic situation.

7. Notes

Covid is not over yet. In future there may be any other challenges regarding the health problems or pandemic situation. HEIs should take initiatives to take part in the national programme to overcome the difficulties in executing the plans.
